§01 SUMMARY

GENERAL ARRANGEMENT

AI made everything faster. It did not make anyone's taste better – that part still has to be built in on purpose, and building it in is what I do.

Twenty years making digital work for brands, five of them agency-side presenting to automotive, FMCG and broadcast clients. Since 2024 I have built a generative production line end to end – image, voice and video – where brand consistency is enforced by code rather than hoped for, and a design practice that runs from FigJam discovery to a deployed prototype the client can click.

§02 WHERE I'D FIT

OPEN APPLICATION — MY READ

FIT-01	GENERATIVE PRODUCTION THAT STAYS ON BRAND At content volume, the risk is not making enough – it is everything drifting off-brand at once. I solve that by compiling the brand into the machine: character sheets, style register, camera grammar and colour as a package, hash-locked to reference plates by tests, with a vision judge grading each frame trait by trait. Calibrated from five false fails on six good frames to three of three defects caught, none false. TOOLS → ComfyUI, SDXL + LoRA, Ideogram, Nano Banana, Wan, Gemini vision, ffmpeg
FIT-02	TURNING CLEVER EXPERIMENTS INTO A LINE THAT RUNS Most agencies have three people doing remarkable things in isolation and no way to make it everyone's. I build the other half: deterministic linting of every generated output with failures fed back once, A/B suites that guard a prompt change like a test guards code, and my design canon shipped as an installable plugin, stress-tested across 20 unsupervised generations with the failures written back as rules. METHOD → promptfoo suites, LLM & vision judges, canon-as-plugin, ADR-governed decisions
FIT-03	AN AI-NATIVE PROCESS A CLIENT CAN WATCH WORK For Awesome Nuts the whole engagement ran this way: discovery on a FigJam board, generative exploration to widen the field in an afternoon, a Figma design system assembled through the Figma MCP, then a near-code prototype deployed and clickable – they reviewed the thing rather than a flat comp. Live at awsothenuts.vercel.app. I also coached their in-house AI designer through it in three sessions. METHOD → FigJam → generative exploration → Figma DS via MCP → deployed prototype
FIT-04	INTERACTIVE AND CAMPAIGN WORK WITH A TRACK RECORD Five years at Demodern: Mazda Germany's online sales platform, led design and build end to end – conversion +18%, qualified dealer inquiries +30%. Nestlé Wagner packaging AR, Bauhaus100 face filters, Spark AR social games, a conversational interface for children at broadcast scale for Super RTL. Concurrent clients, presented myself, shipped to deadline. RANGE → automotive · FMCG · broadcast · culture · NGO · demodern.de/en/projects/mazda-find-my-mazda
FIT-05	ONE DESIGN LANGUAGE ACROSS MANY SURFACES For an enterprise platform the real problem was not a dated skin but no shared system: I built an atomic design system across an Nx monorepo with a Figma-to-code loop, so the component decided in Figma is the component that ships. The same discipline is what keeps a brand coherent across seven offices and a dozen channels. STACK → Figma libraries & variables, design tokens, Next.js, React, Tailwind

CO-FOUNDER & CHIEF TECHNOLOGIST

MonstoryX

2024 – present

- Built the studio's generative production line end to end – script, keyframes, voice, lip-sync – with brand canon compiled into every prompt; output public at youtube.com/@monstoryx/shorts.
- Art direction for the brand itself: four characters, style register, camera grammar and story format, written as canon that people and machines both follow.
- Designed and built the platform around it: 25-workspace TypeScript monorepo, agent workflows, evaluation and billing. In pre-alpha with teachers.

LEAD PRODUCT ARCHITECT

XiTrust / Moxis

2024 – 2026

- Atomic design system across an Nx monorepo with a Figma-to-code prototype loop; local LLMs turning static corporate forms into conversational workflows.

DESIGNER & DEVELOPER – HOBO LABS

Nutrons / Awesome Nuts GmbH

2026

- Gamified web app on a fixed-fee contract: concept, UI, build and launch – QR-scan reward economy, endless-runner mini-game, leaderboard, 20,000 unique codes. Plus AI-workflow coaching for the client's in-house designer.

IOS DEVELOPER

Rise World

2021 – 2024

- Key developer on the ePA (elektronische Patientenakte), Germany's national electronic patient record – accessible, secure and compliance-audited, used by millions.

LEAD CREATIVE DEVELOPER & TECHNICAL DIRECTOR

Demodern (agency)

2016 – 2021

- Find My Mazda – led design and build of Mazda Germany's online sales platform; conversion +18%, qualified dealer inquiries +30%. My Mazda – architected the app across all EU markets.
- Nestlé Wagner packaging AR, Bauhaus100 face filters, Spark AR social games, Super RTL conversational interface for children, MSF campaigns.

GENERATIVE	ComfyUI (SDXL + LoRA character pipelines), Ideogram, Nano Banana, Wan, Gemini text & vision, Resemble TTS, ffmpeg · canon-as-package, vision judges for on-model selection
DESIGN	Figma (libraries, variables, prototyping, Figma MCP), FigJam, design tokens and atomic systems, layout and typography, Adobe Photoshop / Illustrator / InDesign
BUILD	TypeScript (strict), Next.js, React, Tailwind, Radix, React Three Fiber, Node.js, Postgres · prototypes that are already code
INTERACTIVE	Spark AR (face filters, packaging AR), Unreal Engine 5, Swift / iOS, React Native, conversational interfaces (Dialogflow, local LLMs)
EVALUATION	promptfoo, LLM & vision judges, deterministic output linters, Vitest, Playwright, OpenTelemetry
CLIENTS	Mazda · Nestlé Wagner · Super RTL · Bauhaus100 · Médecins Sans Frontières · XiTrust · Awesome Nuts

City College Manchester – HND Multimedia Design · ND Art Foundation with Mathematics · City & Guilds Project Management

Languages – English (mother tongue) · German (Grundkenntnisse, actively improving – I live in Graz)

Open application – portfolio and case walkthroughs on request, including the files behind anything on this sheet.
